Truck Team OS – Admin guide

Montréal · November 3, 2026

What the system is

Truck Team OS replaces the paper route sheet. Crews fill in their route on the truck's iPhone, dispatch checks and accepts it in the web admin, and the admin keeps the lists and rates everything is calculated from.

Part	Who uses it	Where
Crew app	Truck team members (crew lead on the truck's phone)	iPhone app "GOT-Crew" (TestFlight during the pilot, then installed on the truck phones by Mosyle)
Web admin	Dispatchers, administration, senior ops	https://gotjunk.innodigital.ca
Database	Everyone, through the two apps	Supabase, Canada (Montréal region)

As admin you set up who can sign in, the trucks, phones, dump sites and rates, payment methods, ranks and the profit-share values. Dispatchers use what you configure every day, so a wrong rate or a missing truck shows up on their screens first.

The admin opens in French; switch to English with the FR / EN selector at the top right. This guide gives each screen's French name, then the English one in parentheses.

Signing in, roles and invitations

Every login has one role. The role decides what the person sees and changes; the database enforces it, whatever the screen shows.

Role (French name)	Signs in to	Can do
Membre d'équipe (Truck team member)	Crew app only	Enter their own route until it is submitted
Répartiteur (Dispatcher)	Web admin	Create routes, review, return, accept and reopen them, count cash; read configuration
Administration	Web admin	Everything a dispatcher does, plus invite users and manage the team; edit configuration only with configuration rights
Direction (Senior ops)	Web admin	Everything, including configuration and granting senior ops or configuration rights

Invite someone

1. Go to **Équipe (Team)** → **Utilisateurs (Users)** → **Inviter un utilisateur (Invite a user)**.

2. Enter their email and pick the role.
3. For a crew member, pick their **Employé (Employee)**: a crew login must be linked to an employee, so their routes and profit share are theirs.
4. Tick **Droits de configuration (Configuration rights)** only for people who should change rates and lists. Only senior ops can grant it.
5. Click **Envoyer l'invitation (Send invitation)**. They receive an email, choose a password of at least 8 characters, and are in.

The invitation email currently comes from Supabase's own address (open question S12). A crew login that tries the web admin sees a message that it is for dispatch and administration only.

Forgot password: the person clicks **Mot de passe oublié?** on the sign-in page and gets a reset link by email.

Configuration

The **Configuration** page holds every list and rate the apps calculate from. Without configuration rights it is read only. Changes reach the crew phones at their next sync, usually within seconds when they have signal.

Tab (French)	English	What it holds	When to change it
Tarifs de dépotoir	Disposal rates	$ per tonne for each site and material, as a cost, a credit or free; minimum weight and when it applies; start and end dates	A dump changes its price
Partage des profits	Profit share	Wage per team hour, franchise fees, fuel % (one truck, split day, 2 trucks), swing truck fee, minimums, training-day rule, COGS bands, % per rank	The profit-share sheet changes
Raisons d'annulation	Cancellation reasons	Reasons dispatch picks when a job is cancelled	A new reason is needed
Liste de fin de journée	End-of-day checklist	What dispatch ticks before accepting a route; "required" items block acceptance	The closing routine changes
Rangs	Ranks	Wingman, Professional, Expert, JR Coach…	A rank is added or renamed
Routes	Routes	The route names on the daily tracker (C1, E1, RN W1, LAUR2…)	A route is added or renamed
Camions	Trucks	Each truck's name (Pink, Bleu, Titan…)	A truck is added or retired
Téléphones	Phones	Each truck phone's label (4026, 4027…)	A phone is added or replaced
Sites	Sites	Dumps and depots, their type, whether they issue tickets and need a ticket photo, address	A new dump is used

Tab (French)	English	What it holds	When to change it
Matières	Materials	Garbage, wood, bedload, metal and electronics, donations…	Rarely
Modes de paiement	Payment methods	Credit card, debit, cash, invoice, e-transfer…, and which ones are cash	A payment method is added
Paramètres	Settings	Other values, for example whether cash includes tips	Rarely

Changing a rate. Rates are dated, so past routes keep the price that applied on their day. To change one: click **Terminer (End)** on the current rate and give its last day, then add the **Nouveau tarif (New rate)** starting the next day. Old rates stay under **Tarifs antérieurs (Past rates)**.

Turning something off. Untick **Actif (Active)** instead of deleting. It disappears from new routes but stays on past ones.

Names must match the tracker. Dispatch pastes routes from the daily tracker, and trucks, phones and people are matched by name. Enter routes, trucks and phones exactly as they appear in the tracker (RN W1, Pink, 4029).

Team: employees and ranks

The **Équipe (Team)** page has two lists: **Employés (Employees)**, the people who work on the trucks, and **Utilisateurs (Users)**, the logins. An employee can exist without a login; every crew login points to one employee.

Add an employee. Click **Nouvel employé (New employee)** and enter the full name as it is written in the daily tracker, plus the Ceridian ID and language if you have them. The tracker paste finds people by this name, so "Marie-Ève Gagnon-Roy" in the tracker should be the same here.

Link a login to an employee. In **Utilisateurs (Users)**, choose the person in the login's **Employé (Employee)** list; it saves right away. The list only offers employees without a login, because an employee has one login at most. A crew login always keeps an employee; a dispatcher or admin login can have none. You can't change your own login.

Change a rank. Use **Changer le rang (Change rank)** with the date it takes effect (**Depuis / Since**). Ranks keep their history. A route uses the rank in force on its date, and that rank is frozen when dispatch accepts the route, so a later promotion never changes a past profit share.

Someone leaves. Click **Désactiver (Deactivate)** on the employee, and deactivate their login in Users. They disappear from new routes but stay on past ones. Nothing is deleted.

Payments, audit log and export

Paiements (Payments) shows one day's Stripe card payments, read only. Only administration and senior ops see it. Pick a date to see:

- totals per HQ login (the crew member who took the payments): number of payments, revenue before tax, tips, amount;
- each payment: time, Opportunity ID, amount, tip, revenue before tax, succeeded or failed, card reader or typed in, HQ login;
- the matching job in the app with a link to its route, flagged when the app's total plus tip differs from Stripe.

Revenue before tax is worked out as (amount − tip) ÷ 1.14975. The page updates by itself every minute while it is open. Failed attempts and payments refunded in full are shown greyed and don't count; a partial refund counts for what was kept. When a job is paid in two parts, the parts are added up before comparing with the app. Cash jobs never appear here. The page reads Stripe with a read-only key stored on the server; customer names, emails and card numbers are not shown.

Journal (Audit log) lists every change made to routes, jobs, disposal, cash, crew, rates, employees and logins: when, what, who (by role), the reason and the fields changed. Filter by record type. Nothing can be edited or removed there.

Exporter les routes (Export routes), on the same page, downloads a CSV of every route between two dates with its hours, jobs, revenue, tips, expected cash, net disposal and revenue per hour, for a spreadsheet or the accountant.

Tickets

Signaler (Report), at the bottom right of every page, files a ticket from where you are. Pick **Quelque chose ne marche pas (Something is broken)**, **Proposer un changement (Suggest a change)** or **Question pour le client (Question for the client)**, give a short title and say what happened or what should change. The page and the part of the app are filled in for you. You can add screenshots: paste one (Ctrl+V), drop a file, or use **Prendre une capture (Take a screenshot)**. Browser details and recent errors are attached unless you untick them, and you can see exactly what is sent.

The **Tickets** page lists them, with the number of open tickets next to it in the menu. Filter by status, type, priority or part of the app, or search. On a ticket, anyone in the admin app changes the status, priority, type or part, and adds comments with files; every change is kept in its activity. **Copier pour un développeur (Copy for a developer)** copies the whole ticket as text.

Tickets are never deleted: close them as **Terminé (Done)** or **Ne sera pas fait (Won't do)**. Central (central.innodigital.ca) reads them once the feed is connected.

Rules the system enforces, and fixes

These rules hold for everyone, in both apps:

- A route has exactly one driver; every crew member is the driver, a navigator or onboarding.
- A person can't be on two active routes the same day.
- The crew edits a route only until they submit it. After that only dispatch changes it, and an accepted route must be reopened, with a reason, before anyone edits it.

- Returning, reopening or cancelling a route always needs a reason, and every change is in the audit log.
- Nothing is deleted: things are deactivated, cancelled or ended.

Problem	Fix
A truck, phone or person is "unknown" when dispatch pastes the tracker	Add it in Configuration or Team with the tracker's exact name, or pick it from the list in the paste preview
"Lecture seule" on Configuration	The login has no configuration rights; senior ops grants them
A crew member doesn't see their route	Their login must be linked to the right employee, and they must be on that day's route
An invitation didn't arrive	Check spam; invite again from Users
Profit share looks wrong	Check the values in Configuration → Partage des profits and the person's rank on the route's date
